A THOUSAND AND ONE POSSIBILITIES WITH TREVI EVOLUTIVE POOLS.

Manufactured in Quebec, Trevi self-supporting pools combine quality and innovation to withstand our harsh climate. Their reinforced-concrete monocoque structure, unique on the market, offers unparalleled strength and adaptability, enabling custom installation to suit any type of terrain: flat or steep, wide or narrow.

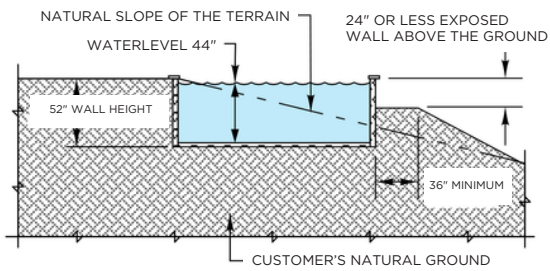

1

TREVI PRESTIGE installed on a flat terrain

2

TREVI PRESTIGE EXPOSÉE one to three exposed wall sides at 24" or less from the ground

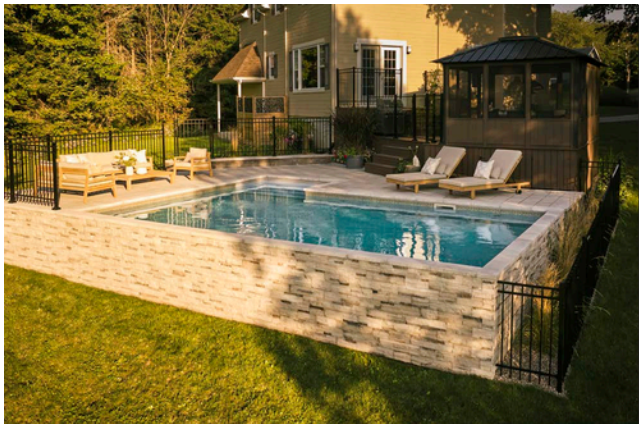

The same structure is available in several ultramodern linear models. The following diagrams present the installation options.

Completely dug in the ground, the **Trevi Prestige** is ideal for flat terrain. It's available in the shape and size of your choice and can be installed wherever you like.

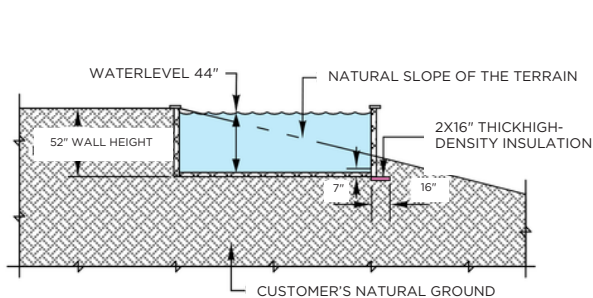

For steep terrains, the **Trevi Prestige Exposéé** is the model of choice. In this version, it has one to three exposed wall sides above the ground. Depending on how steep the terrain is the exposed wall sides can rise up to 63".

The **Trevi Europea** offers unprecedented flexibility in landscape design. Its walls rise from 14" to 16" above the ground.

The **Trevi Futura** can be installed close to the building for greater accessibility. It is offered in two wall heights, allowing bathers to enjoy 4' or 5' of water.

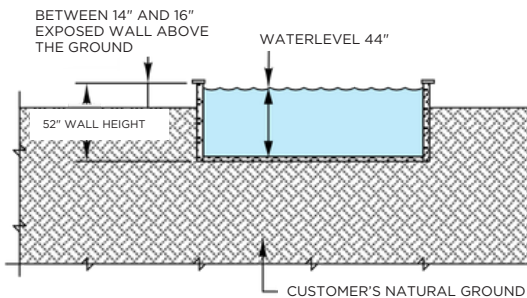

3

TRÉVI PRESTIGE

Self-supporting in-ground pool

EVOLUTIVE POOLS

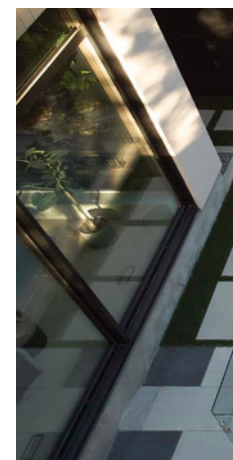

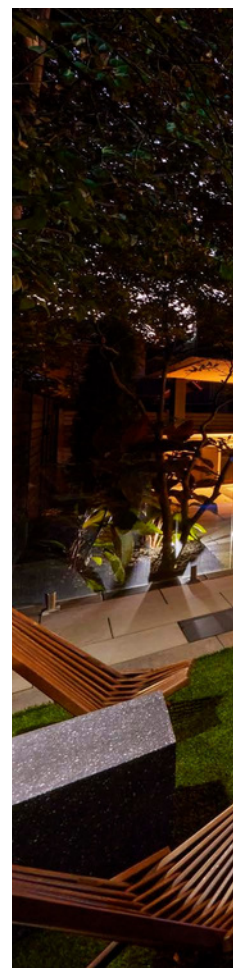

Simply sumptuous, the Trevi Prestige in-ground pool is available in the shape and size of your choice. Made entirely of concrete, this high-quality pool is durable and long-lasting. Its higher walls provide the groundwork for a larger, flatter floor, thus enhancing the swimming experience. With its sleek design and a wide choice of liner patterns, it will blend in perfectly with your decor!

A THOUSAND AND ONE WAYS TO MAKE THE MOST OF YOUR YARD.

TRÉVI EUROPEA

Built-in pool

EVOLUTIVE POOLS

The Trevi Europa is the perfect balance between an above-ground and an in-ground pool. Entirely made of concrete and covered with a trendy liner, it will perfectly match your outdoor design. Its unparalleled sturdiness is such that it can rise 16 inches above ground, allowing you to personalize its exterior finish to your taste with decorative stones, stucco, or any other material of your choice. This built-in pool offers unsurpassed design flexibility, including the possibility of leveraging the pool's sidewall as part of your landscaping arrangement.

A THOUSAND AND ONE IDEAS TO BEAUTIFY YOUR SUMMER.

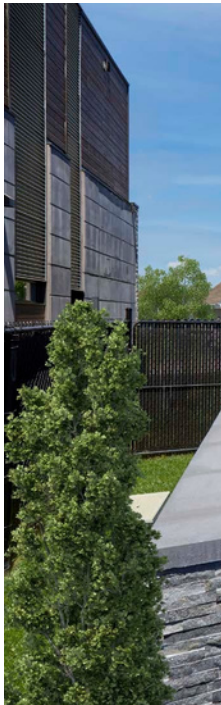

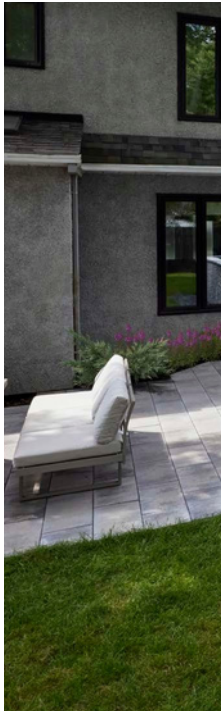

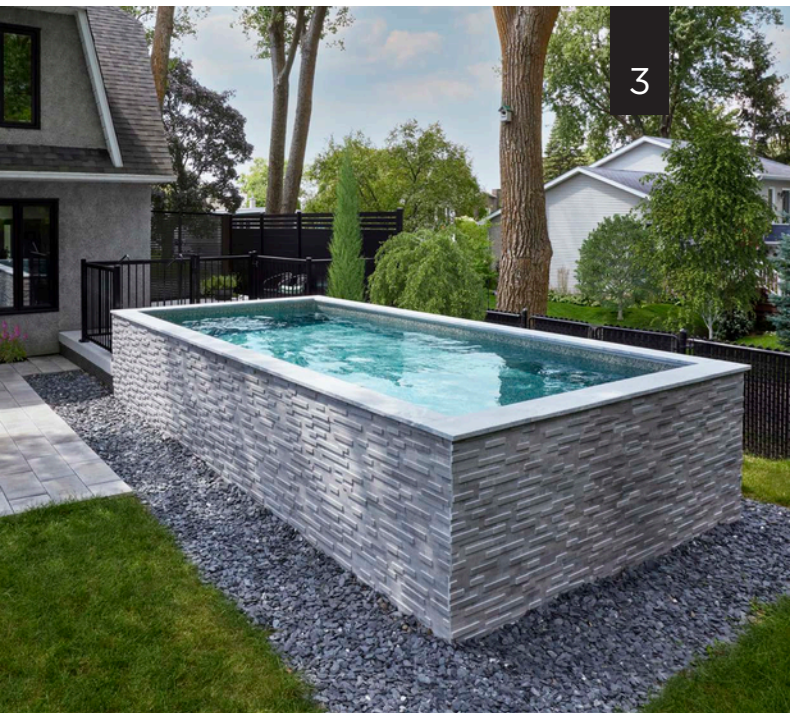

TRÉVI FUTURA

High relief structure pool

With its modern and refined look, the Trevi Futura is sure to impress. Its unique concrete structure offers unparalleled strength and flexibility to adapt to any type of terrain and decor. Whether your space is large or small, flat or steep, you can dream big with this highly accessible pool. Much like an in-ground pool, it is possible to have both a shallow end and a deeper end (optional). Thanks to a wide choice of exterior sidings and an installation that requires no heavy machinery, the possibilities are endless for creating a yard that reflects your image.

A THOUSAND AND ONE REASONS TO ESCAPE AT HOME.

TRÉVI INFINITY

High relief overflow pool

This overflow pool creates a spectacular effect at an affordable price. Its magnificent waterfall can be installed on the shortest or longest wall to suit your entire outdoor space. As well as being highly aesthetic, the overflow helps remove debris on the surface of the water, making regular maintenance easier.

It features a reinforced membrane three times thicker than a standard liner. This premium membrane offers incomparable durability and adds a prestigious touch. It allows the creation of a stair with a full-width bench, perfect for gathering or basking in the sun. Its thickness allows loungers to be placed directly on the pool deck.

The wide selection of exterior finishing materials ensures seamless integration with the building, the pool deck and the reinforced membrane.

TRÉVI PREMIUM

Self-supporting in-ground pool / Reinforced concrete

A THOUSAND AND ONE POSSIBILITIES WITH THE TREVI PREMIUM POOL.

TRÉVI PREMIUM

Self-supporting in-ground pool

Connected together, the modular structural sections are easy to assemble. They are held together by a steel frame inserted in the pool's perimeter. Concrete is then poured into each modular section and each section's structural brackets. When filled with concrete, the modular sections constitute a solid base on which the sidewalk or paver stones are then installed.

Modular structural sections are held together with a steel frame. Welded together as one structure, the components create a unit that has remarkable strength and superior stability.

Trevi Premium Modular Panel System

- A. Reinforced modular sections.
- B. Concrete injected into modular sections.
- C. Aluminum liner retention system.
- D. Two rows of steel reinforcements inserted in pool perimeter.
- E. Resin injection moulding technique.
- F. Concrete added to the stabilizing footing.

A THOUSAND, AND ONE WAY TO GATHER FRIENDS AND FAMILY.

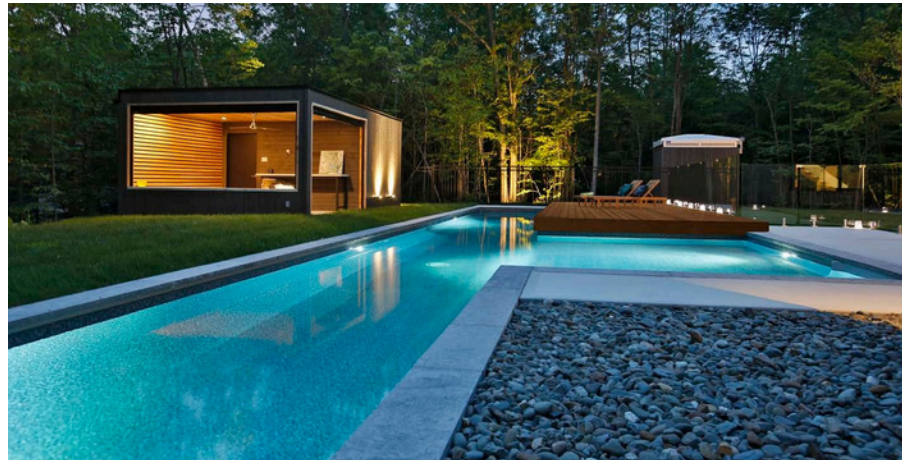

TRÉVI PREMIUM

Self-supporting in-ground pool

TIMELESS POOL

Entirely manufactured in Quebec, this self-supporting reinforced concrete pool offers unparalleled solidity with its 9.5 in. thick panels. The design prevents any loss of volume.

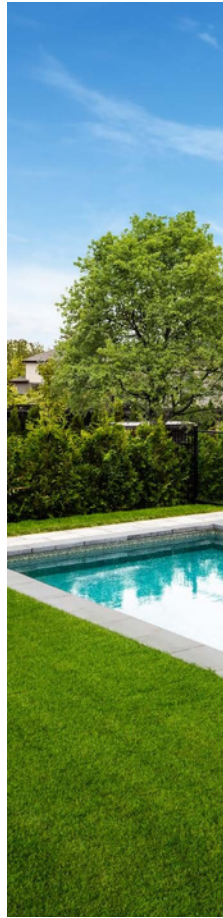

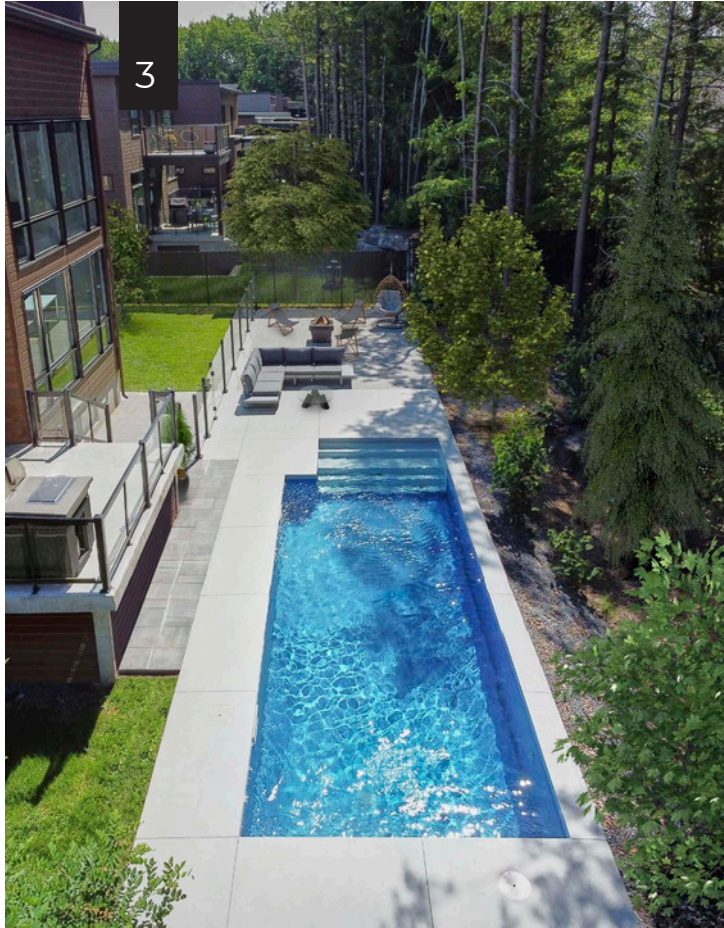

With its timeless style and a wide range of liner patterns and finishing materials, it will perfectly match your outdoor space for years to come.
